**Animal Food Making and Granules Packing Machine Price : 1550000/- INR**

### **Packaging & Delivery**

Packaging Detail: fumigation-free board, containers

Delivery Detail: 10-15 working days against prepayment

### **Specifications**

Pellet making Machine

1. Animal feed pellet making machine

2. Poultry feed pellet machine
3. Carbon Steel
4. Advanced design

## **Introduction of animal food pellet making machine**

### **Introduction of pellet making machine:**

Pellet making machine is the process of making grain into animal feed. The objects are used for feeding the animals.

### **Main Features of Feed Pellet making Machine:**

- Gear directly-connecting driving is adopted for high efficiency;
- The bearing and oil seal in the main drive are imported, resulting in long service life and low equipment noise;
- Feeder, conditioner and chute are made of stainless steel with long service life;
- Feeder is variable speed controlled to meet different outputs requirements;
- The conditioner is longer and thicker, built-in steam set could make steam condition cooking material fully, ensure the high quality of the feed;
- It is with magnet and over load protection system, which can protect machine well during production;
- New style S-shape spring coupling is adopted to obtain big offset travel and further smooth running;
- It can be fitted multi-layer jacket condition or double differential conditioner so as to meet the different requirements of producing high quality shrimp feed;
- The special technique dies and shrimp feed knives make that the cropping is more average and the cut is more flat.

### **Main advantages of pellet making machine:**

1.

pellet machine, the production process in the machinery itself under pressure, make feed starch occurrence of a

certain degree of maturation role, to produce a concentrated flavor and feed hard texture, in line with the biological

characteristics of the pig, cattle, sheep, rodents gnawing, improved feed palatability, increase the intake of the animals.

2. pellet machine, the particle formation process enables the grain, legume trypsin boycott factor degeneration, reduce

adverse effects on the digestion, can kill the parasite eggs and other pathogenic microorganisms, reducing the

variety of parasitic diseases and digestive tract system diseases.

3. pellet machine to facilitate feeding, high utilization, easy to

control the feeding amount, saving feed, clean and sanitary. Especially

fish, feed pellets dissolved in water is very slow and will not be flooded by the sediment can reduce waste.

4. pellet machine template and pressure roller adopts refined 40-chromium alloy wear resistant materials with long life, reasonable structure, strong and durable and so on.

#### **Technical Parameters of pellet making machine:**

Power	Capacity(t/h)	finished product size
22kw	0.5-1.5	4-6mm
37KW	2-4	4-6mm
55KW	3-6	4-6mm
90kw	8-10	4-6mm

## **Packaging & Delivery**

Packaging Detail: Wooden case

Delivery Detail: Within 15days of the order

## **Specifications**

- 1) packing machine for animal feed, rice, wheat
- 2) automatic packing machine
- 3) with sealing printing
- 3) ISO; CE; SGS

## **Description**

The system is applied to quantitative automatic weighing, filling, kneading, accumulating weigh and times, stitching and conveying with manual assistant for powder, pellet material in the factory or other industry.

## Features

- 1) Take three speeds feeding to guarantee the precision at min weight and the speed at max weight.
- 2) The head of bag stitching machine, conveyor, and hot sealing machine can rise and fall. And at the same time, the system is applied to sealing and convey with max and min bags.
- 3) There is shock-absorbing device in weighing system; it could avoid the shock of other devices through floor and tube to affect the weighing system.
- 4) There is good seal in system, and it has dust catcher and aspirator.
- 5) There is guide grooves in conveyor roller and guide bars in conveyor belts to avoid cracks.

## Function

1. There is detecting device in system.
2. Processes function of automatic modifying drop height.
3. Processes function of self-test, error pilot and fault code indication.
4. With the serial interfere to communicate the computer.
5. With five-figure password to control the accumulator in system.
6. Pre-set filling number in system.

## Main Data

Model	Description	Dimensions (mm)	Weight (kg)	Speed
ZCS-10	2-10kg/pc	1500*800*2000	300	180-240pc/h at slow speed
ZCS-25	15-25kg/pc	2200*880*2300	500	260-330pc/h at middle speed
ZCS-50	25-50kg/pc	2300*900*2300	600	500-600pc/h at fast speed
